

CURRICULUM VITAE

1. PERSONAL INFORMATION

Family name, first name: Jabaudon, Denis

Researcher unique identifier (ResearcherID): B-8802-2014 ; <http://orcid.org/0000-0003-2438-4769>

2. EDUCATION

- 1996-2000 MD, PhD, Brain Research Institute, University of Zurich, Switzerland. Thesis director: Prof. Beat Gähwiler.
- 1995-1996 Masters in Molecular Biology and Neurosciences, Lausanne University, Switzerland
- 1989-1995 Medical Degree, Lausanne University, Switzerland.
- 1987-1989 Scientific Baccalaureate, La Tour de Peilz, Switzerland.

3. EMPLOYEMENT HISTORY

Current

- 2023- Associate Professor, Université Paris Cité.
- 2015- Full Professor, Dept. Basic Neurosciences, Faculty of Medicine, Geneva University.
- 2009- Attending Physician (Médecin Hospitalo-Universitaire), Neurology FMH, Dept. of Clinical Neurosciences, Geneva University Hospital (HUG).

Past

- 2009-15 Assistant Professor at the Dept. Basic Neurosciences, Faculty of Medicine, Geneva University.
- 2008-09 Chef de Clinique, Department of Neurology, Geneva University Hospital (HUG).
- 2008-09 Junior Group Leader (“Chef de Clinique Scientifique”), Dpt. of Basic Neurosciences, Faculty of Medicine, Geneva University.
- 2004-08 Postdoctoral Research Fellow, Harvard Medical School, Cambridge MA, USA, Lab. Prof. Jeffrey Macklis.
- 1999-04 Clinical Neurology Resident, Geneva U. Hospital (HUG) and Lausanne U. Hospital (CHUV), *Program Head*: Prof. Theodor Landis.

4. INSTITUTIONAL RESPONSIBILITIES

- 2018- Director, Dept. of Basic Neurosciences, Faculty of Medicine, University of Geneva
- 2017-22 Director, Geneva University Neurocenter.
- 2017- Council member, Neuroscience teaching unit (“PEC”)
- 2016-18 Member of the “Relève et Recherche” Council, Faculty of Medicine, Geneva University.
- 2011-15 Member of the Faculty Council “Conseil Participatif”, Faculty of Medicine, Geneva University.

5. AWARDS AND HONORS

- 2023 Roger De Spoelberch Prize
- 2022 Krieg Cortical Discoverer Award
- 2022 Joseph Altman Award in Developmental Neuroscience
- 2020 ERC Advanced GRANT
- 2017 Max Cloëtta Prize
- 2014 Freedman Award from the Brain and Behavior Foundation (NARSAD) for « Exceptional Basic Research in Neuroscience».
- 2014 Robert Bing Prize from the Swiss Academy of Medical Sciences.
- 2014 Pfizer Research Prize, Basic Neuroscience, with co-authors Andres De La Rossa and Camilla Bellone.
- 2012 Leenaards Foundation Award.
- 2011 NARSAD (Brain and Behavior Research Foundation) Young Investigator Award.
- 2010 Gertrud von Meissner Research Award (for research in developmental neurosciences).
- 2009 Swiss National Science Foundation (SNF) Professor Grant.
- 2000 Honors for MD-PhD thesis.
- 1997 MD-PhD Fellowship, SNF.

MAJOR SCIENTIFIC ACHIEVEMENTS

My research interest is in the input-dependent and genetic mechanisms that control the developmental assembly of forebrain neurons into circuits. Specifically, my work focuses on identifying the gene expression programs that enable distinct subtypes of neocortical and thalamic neurons to assemble into specific functional circuits, and understanding how sensory experience regulates these differentiation programs during development.

Towards this aim, we have been able to genetically re-engineer specific neuronal circuits by reprogramming postmitotic cortical neurons *in vivo* (**De La Rossa et al., Nature Neuroscience 2013**). Conversely, we have shown that external stimuli determine neuronal diversity in select visual circuits (**Golding et al., Neuron 2014**), and that thalamocortical input acts to instruct the identity of their postsynaptic cortical partners during development (**Pouchelon et al., Nature 2014**). Likewise, descending input onto thalamocortical neurons instruct their genetic identity (**Frangeul et al., Nature 2016**). Genetic and input-dependent processes are thus tightly intertwined during circuit assembly. We have recently been able to isolate specific subtypes of neuron as they are being born and identify their developmental transcriptional programs (**Telley et al., Science 2016; Telley et al. Science 2019**). This latter work revealed a dynamic developmental transcriptional matrix onto which input-dependent factors can act to determine final neuronal identity. Recently we have shown that beyond strictly genetic programs, bioelectrical parameters are critical to define the fate of progenitors of the neocortex, further emphasizing the cross-talk between extrinsic and intrinsic factors at play during development (**Vitali et al., Cell 2018**). Likewise, dynamic differences in the expression levels of a largely generic set of genes, rather than fundamental differences in the identity of developmental genetic programs, may account for the emergence of intra-type diversity in cortical neurons (**Klingler et al., Nature 2021**). Finally, we have shown that apical progenitors are temporally plastic and can re-enter past molecular, electrophysiological and neurogenic states when exposed to an earlier-stage environment by sensing dynamic changes in extracellular Wnt (**Oberst et al., Nature 2019**). Together, these findings have enabled us to understand how input-dependent and cell-intrinsic factors interact during circuit assembly in the mammalian neocortex.

RESEARCH OUTPUT

1. Publications in peer-reviewed journals

Past five years only. Full publication list available at <https://goo.gl/hq7u1j> or <http://orcid.org/0000-0003-2438-4769>

1. Santinha AJ, Klingler E, Kuhn M, Farouni R, Lagler S, Kalamakis G, Lischetti U, **Jabaudon D**, Platt RJ. (2023). AAV-mediated single-nucleus CRISPR screening of DiGeorge syndrome in vivo. **Nature**, 371(6527), eaba4517. <https://doi.org/10.1126/science.aba4517>.
